

STAT

Alternatives

1. To make TOD a Programming tool, integrated with the existing PPB system's cycle, as BoB requires U.S. Govt agencies to do this.
2. To make TOD an analytical tool for the purpose of planning. This would lead to the statement of Programming Assumptions and Objectives. This could be of use to NIRB.
3. To use TOD as an analytical tool in support of the analysis of existing resources -- not for programming or planning; just a data base. This would lead to studies and the latter would lead to redeployment of resources. A vehicle for finding out what is presently being done with existing resources. This could aid NIRB. To identify gaps, excesses, yield.
